*Question 4 - What priorities do you recommend for further development of the Gregory Street property (former location of University farm; area west of the University Residence)?*

New field house.

Indoor football practice facility.

Better football facility (sports facilities).

Law or medical school.

Nursing facility.

More well-known shops and restaurants.

Think Green Street at the University of Illinois at Urbana-Champaign.

Build University High School out there and expand ISU.

Build a medical or law school.

Create some kind of professional school (law school, medical school).

Would be good for recreational sports, however it often floods. If that problem was taken care of it would be great for that. It could also be great to have another College out there for different majors.

Basketball courts.

More room for recreational sports.

A library.

I would use that for more academic buildings.

More athletics, for example, it would be great to build a larger field house.

Recreational fields accessible by general students.

Pond and park area.

Vacant for future development.

Maybe this could be another space for trees, fountains, benches. Sort of like an Illinois State Park.

Registered Student Organization and intramurals could use this space. Preview and Passages can utilize it too!

Using the land for additional horticulture and agricultural usage would be great. The farm is so far for research and learning currently. This space would be ideal for expanding the currently small and limited horticulture amenities.

Graduate art studios.

Convenience store option.

Entertainment center.

Turn it back into a farm.

Dorms.

More residence halls.

Community space.

The possibility of an engineering school.

Space for the energy department.

Create a space for the renewable energy department to group products for bio diesel to foster cleaner public transit.

More affordable student housing.

Skating rink.

Something students could find employment at.

Not residence halls.

Keep the campus community small and enclosed.

Students would not go out there even if bus transportation was provided. Similar to Alumni Center.

Move Metcalf School and University High School.

Move Metcalf School and University High School over there. Build new buildings in their place.

More athletic facilities.

You should make a lake that I could go fishing in. Maybe plant some oak trees and make a small wilderness area with bike trail.

Space to play games and outdoor activities.

Place graduate school buildings in the open area.

Greenhouses, renewable energy research.

Do something related back to the community such as a food bank, a health education center, daycare, etc.

More university apartments, maybe more affordable ones.

Make it into a “muscle park” for fall and spring (open air gym).

An Illinois prairie restoration/preservation “park”, a collection of native prairie plants to Illinois.

Make a second main Quad and expand the majors we offer at ISU.

Build more dorms.

Quad 1 majors live near it and Quad 2 majors live near it. Kind of separate but still all ISU.

No classrooms because it would not be very accessible.
